

1/10

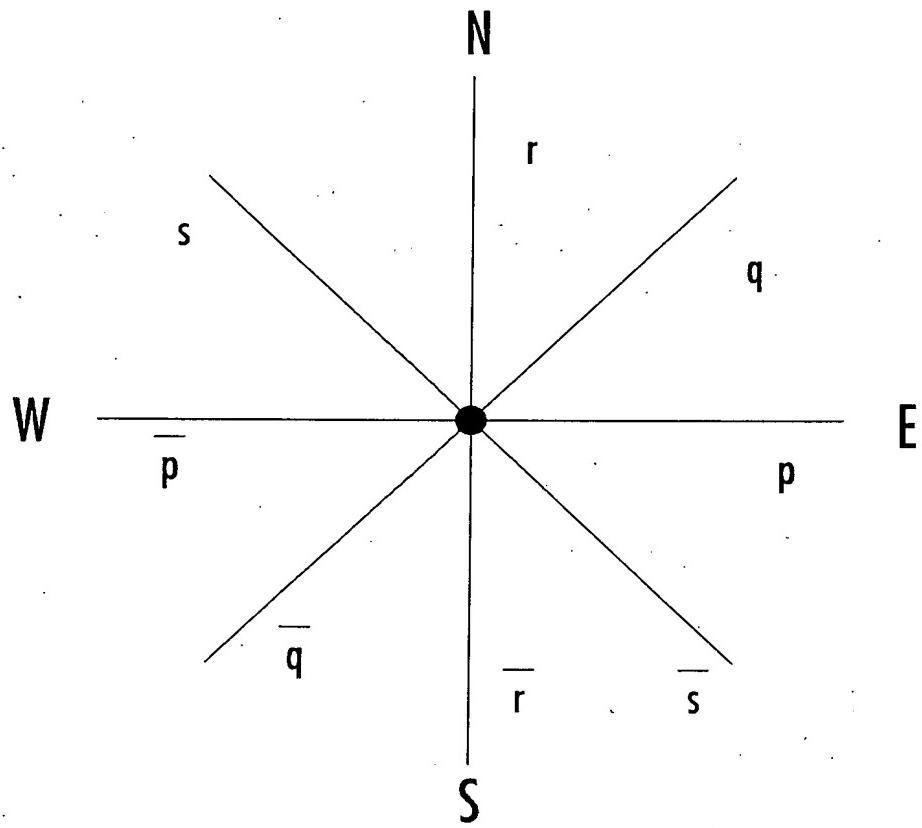

FIG. 1

2/10

Step 1.

$$[-p(qr-s \vee q-\bar{r}-s)] \vee p-q-rs \vee \{p[q(r-s \vee -r-s \vee -rs)]\}$$

Represent Schema in vector notation

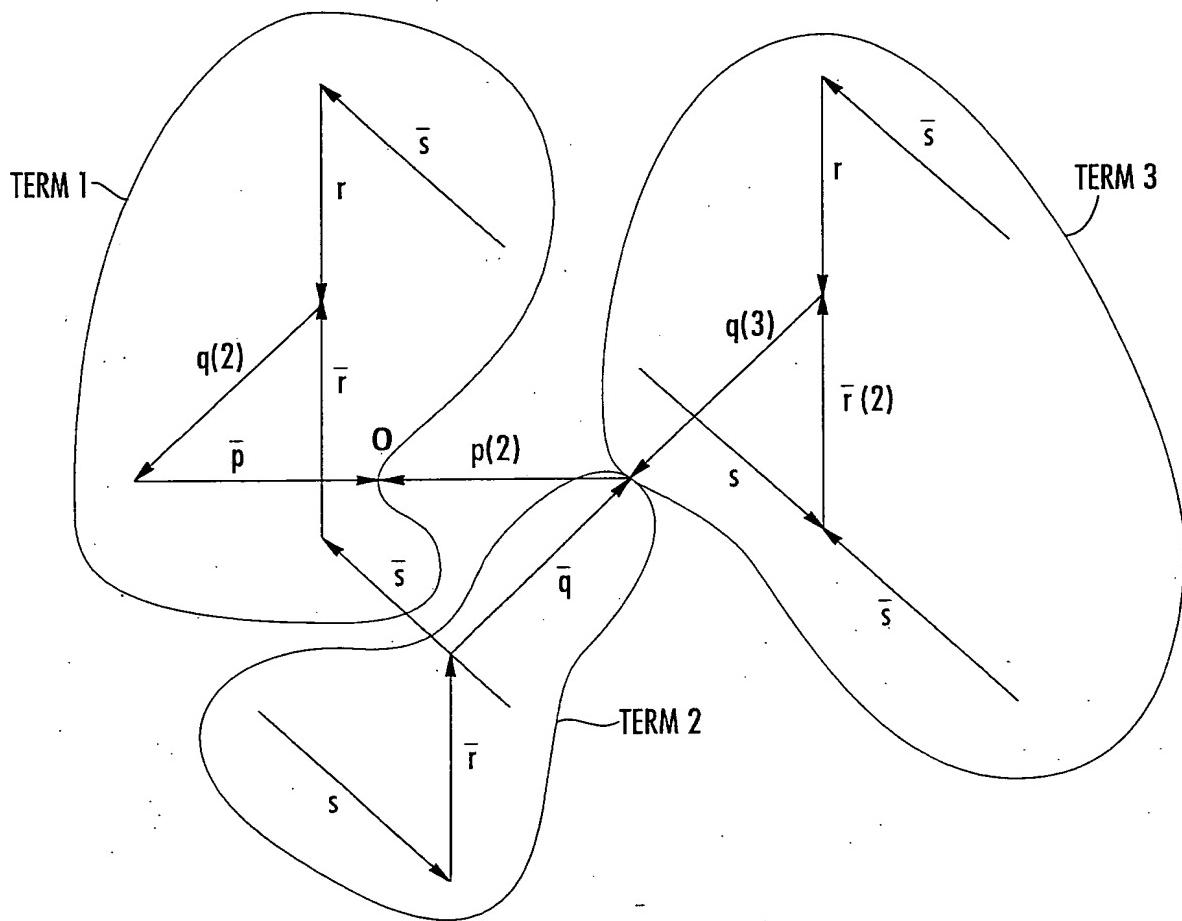

FIG. 2

3/10

Step 2

$$[\neg p(qr-s \vee q-r-s)] \vee p-q-rs \vee \{p[q(r-s \vee \neg r-s \vee \neg rs]\}$$

2. Find greatest symmetry about an opposed couple
 $p, \neg p$

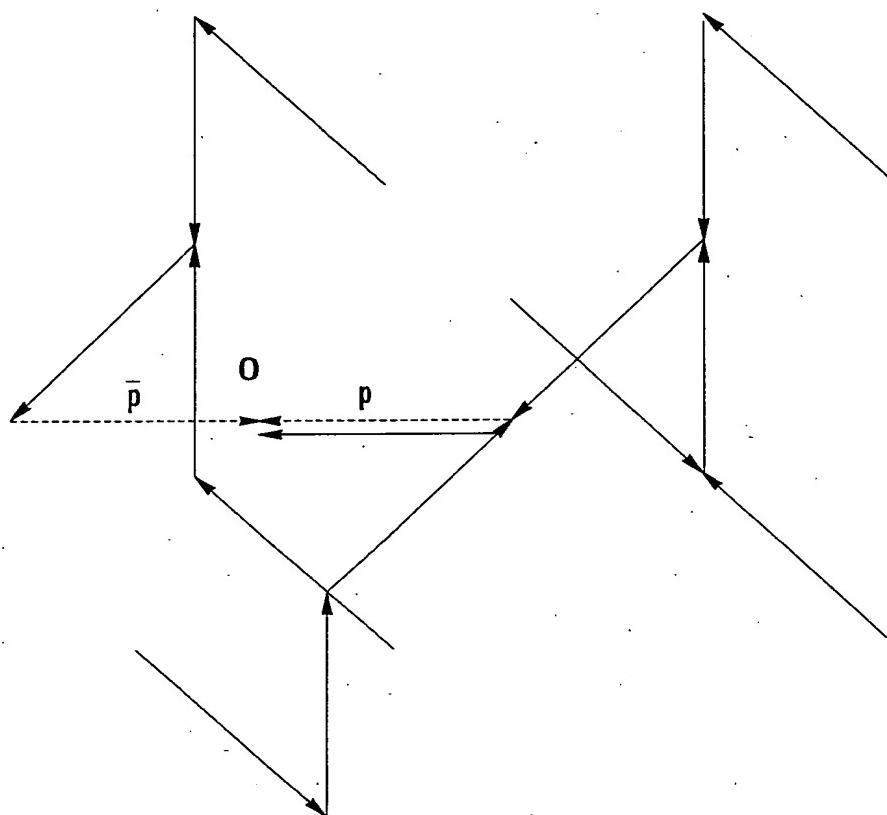

FIG. 3

4/10

Step 3

$$[p(qr-s \vee q-\bar{r}-s)] \vee p-q-rs \vee \{p[q(r-s \vee -r-s \vee -rs)]\}$$

3. Delete the couple, superimpose the symmetries, and delete resulting redundancies. Keep multiple paths (e.g. pq-rs) open.

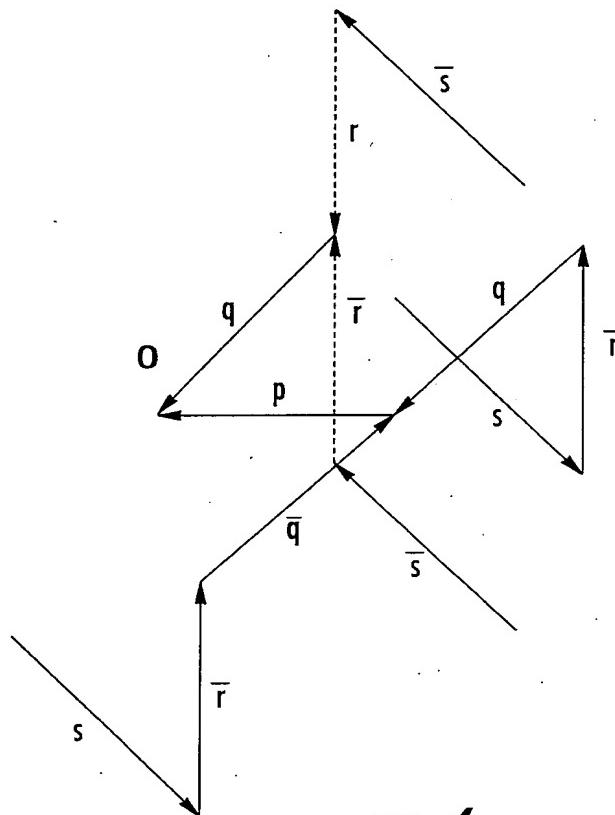

FIG. 4

5/10

Step 4

$$[\neg p(qr-s \vee q-\bar{r}-s)] \vee p-q-rs \vee \{p[q(r-s \vee -\bar{r}-s \vee -rs)]\}$$

Repeat Steps 2 and 3 for the r, -r couple

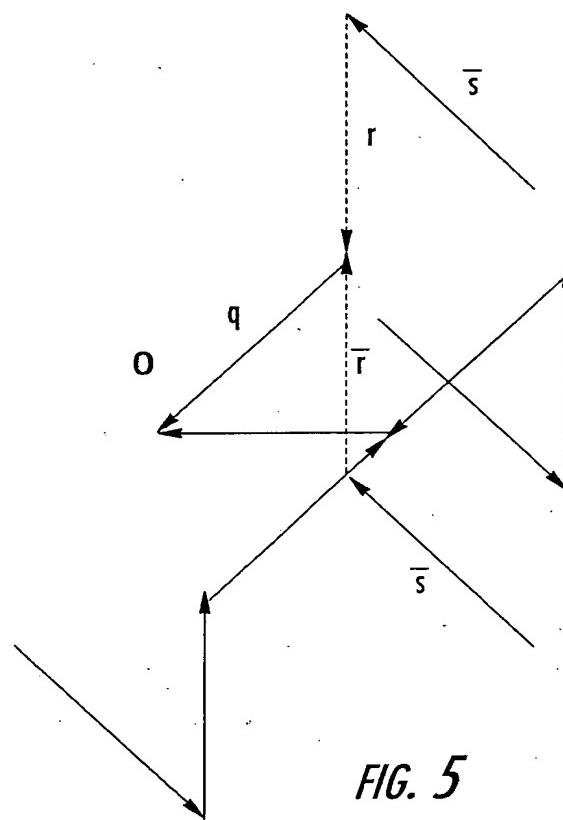

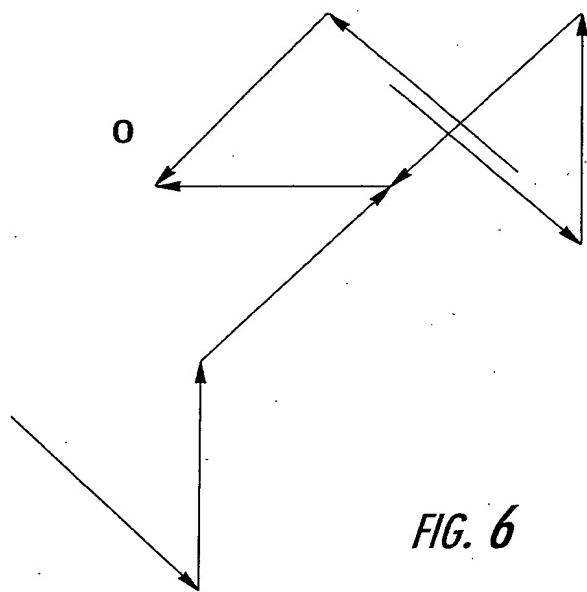

FIG. 5

6/10

Results of Step 4

$$[\neg p(qr-s \vee q-r-s)] \vee p-q-rs \vee \{p[q(r-s \vee \neg r-s \vee \neg rs)]\}$$

7/10

Step 5

$$[\neg p(qr-s \vee q-\bar{r}-s)] \vee p-q-rs \vee \{p[q(r-s \vee -r-s \vee -rs)]\}$$

Repeat Steps 2 and 3 for q, -q couple.

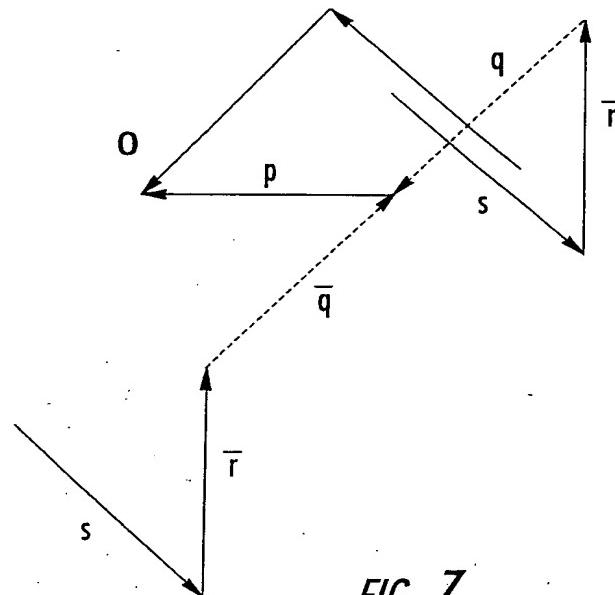

FIG. 7

8/10

Diagram 7

$$[\neg p(qr-s \vee q-\bar{r}-s)] \vee p-q-rs \vee \{p[q(r-s \vee -r-s \vee -rs)]\}$$

Resulting simplified logical expression is:

$$S^*=q-s \vee p-rs$$
